

Unlocking the power of renewable energy

ifac³

Transition to Renewable Energy

Renewable energy is playing an increasingly important role in Ireland's efforts to reduce carbon emissions and achieve climate targets. As demand grows for land to host wind and solar farms, supply feedstocks for Anaerobic Digesters, and accommodate key energy infrastructure, agriculture is at the heart of this green transition.

At *ifac*, our team combines deep expertise in both agriculture and renewables, to help you navigate this opportunity and maximise your returns.

Opportunity identification

We'll assess your current situation and develop a customised plan to help you make the best decision. Whether you're a farmer looking to maximise return from your farm, a business looking at reducing costs and emissions, or an investor seeking the most suitable renewable energy project, we'll provide the information you need to succeed. Our expert team will ensure that your project aligns with your risk appetite and desired return on investment.

Drive maximum financial returns

As an experienced accounting and taxation firm, we possess the in-depth knowledge to understand the financial

implications of renewable energy projects. We'll complete a comprehensive financial analysis of any potential project, including feasibility studies, ROI calculations, and detailed cash flow projections, providing you with the insights you need to make informed decisions with confidence.

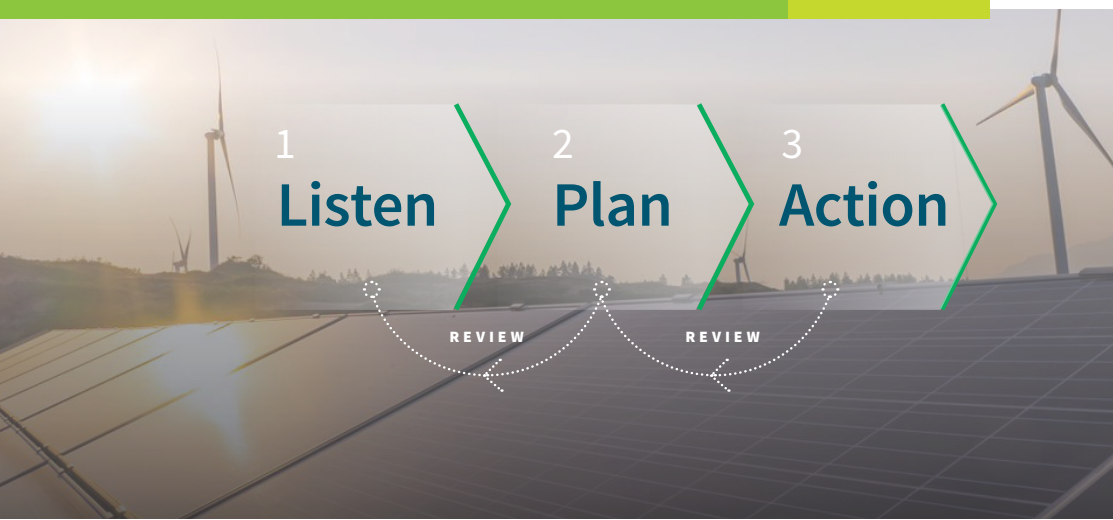

Our team collaborates with your legal advisors to provide strategic tax and commercial insights on complex legal agreements in the renewables sector, ensuring compliance and helping you make informed decisions.

Leverage our deep financial expertise to unlock your project's full potential. Our team has successfully managed the tax implications for many projects, ensuring optimal structures are in place from small-scale ventures to large-scale developments. We provide comprehensive due diligence services, including valuations, to seamlessly guide you through the process, including assessing the selling or purchasing of a renewable energy asset.

Access to Premium Finance: Securing Your Investment

Our banking and corporate finance experts have established relationships with major banks and private investors specialising in renewable energy projects. We'll leverage this network to secure the funding you need, tailoring our approach to your specific requirements and ensuring a smooth and efficient process. We consider all funding options, including grants, loans, and equity financing before putting the correct solution in place for your proposal.

For further information contact our *Head of Banking*, Noreen Lacey at noreenlacey@ifac.ie

Regulatory, Governmental, and Public Relations: Ensuring Smooth Project implementation

Our team's extensive experience navigating regulatory bodies and government departments ensures your renewable energy project can proceed without unnecessary hurdles. We understand the nuances of both renewable energy and agricultural regulations, and we effectively communicate your project's value and benefits to stakeholders. Our dedicated communications team actively builds stakeholder support for your project, ensuring it receives the necessary approvals and public understanding.

The transition to renewable energy presents exciting opportunities for Irish farmers, businesses, and investors. Whether you're exploring your options, looking to maximise financial returns, or need expert guidance on tax, finance, and regulations, our team is here to help.
